

Understanding Your Technology Risks

Businesses today don't only hold physical assets. Through the use of technology companies now are responsible for very valuable intangible assets, such as sensitive data, software and intellectual property, which normal liability policies doesn't account for.

Technology Insurance 101

Public/Products Liability provides protection in the event of bodily injury or property damage. Technology insurance cover is designed to protect against the significant risk of economic loss related to the intangible assets a company owns. A comprehensive risk management plan needs to guard against the unique exposures that the use of technology presents.

Terms to Know

Specialised technology protections are relatively new and the terminology is still evolving as exposures are discovered and more claims are handled. As a result, the terminology can be confusing and hard to understand. The following terms are some of the most common you will need to know to best understand your technology risks and protections:

Cyber liability—A cyber liability policy is a cover that protects against damage from cyber-attacks, data breaches and other basic risks that result from using electronic communications and data storage. They often cover the cost of recreating damaged or lost data or systems, but do not include the costs that stem from the loss or damage, including legal expenses and data notification costs. Sometimes the term cyber liability is used broadly to describe technology related risks and technology insurance protections in general.

Cyber property—The intangible property your company owns. This can include websites, data and

networks. These intangible assets can all be damaged. To protect your cyber property you may need to broaden the property enhancements on your existing policy. Also, check if you have any cover that would protect if your company or an employee caused damage to another organisation's cyber property.

Specialised technology insurance is an important part of your company's thorough risk management planning.

Media and intellectual property liability—All content on the Internet is considered to be published, meaning it is subject to copyrights and infringement. Negative content published online about a person or company can be considered libellous. Take caution when posting anything to websites, forums or social networking sites.

The exposures and threats of business operations involving technology will continue to grow as technology does. Robison & Co Ltd can help you keep your business protected against these specialised risks.
